### Foreword

The Statistical yearbook of the Netherlands 2009 is a practical compilation of the most important statistics on Dutch society. Each chapter covers one theme, with a brief description of relevant recent developments preceding the statistics. The same thematic arrangement of information is also used on Statistics Netherlands' website (www.cbs.nl). The theme structure is prominently accessible on the home page, providing a clear and consistent presentation of the available information.

The Statistical yearbook of the Netherlands is also available online. All tables in the publication can be accessed at www.cbs.nl.

The information in the Statistical yearbook is only a small selection from the wealth of figures available from Statistics Netherlands. The guide at the beginning of the book explains how these figures can be retrieved. Nearly all statistics and the most recent figures are available in the StatLine databank, which can be accessed free of charge via www.cbs.nl/ statline. The databank, too, is set up in along the themes presented in this book.

For further information about Dutch statistics, please use the online form at www.cbs.nl/information.

Director General of Statistics, *G. van der Veen* 

The Hague/Heerlen, June 2009

### Guide

Statistics Netherlands has grouped its statistics into a number of themes. These themes determine the structure of the information both on the website www.cbs.nl and in the StatLine databank (www.cbs.nl/statline). All information available at Statistics Netherlands is arranged in accordance with this theme structure. Each theme has its own theme page, with the latest information, key figures, articles and publications.

All the tables in StatLine, too, are incorporated in the theme tree, an explorer type structure which uses the same theme configuration. The chapters in the Statistical yearbook are also arranged in accordance with these themes. The tables in this book are therefore the best bits from everything contained in StatLine and on the theme pages. If you need information that is not in this book, the website may well be able to provide it.

The following themes are distinguished:

- Agriculture
- Construction and housing
- Education
- Enterprises
- Financial and business services
- Government (and politics)
- · Health and welfare
- Income and spending
- International trade
- · Labour and social security
- Leisure and culture
- Macro-economics
- Manufacturing and energy
- Nature and environment
- Population
- Prices
- Security and justice
- · Trade, hotels and restaurants
- Traffic and transport

In addition, there are a number of dossiers, which incorporate information from a number of themes. These dossiers are also accessible via the website:

- Business cycle
- Census
- Emancipation
- European Union

- Globalisation
- Historical series
- Investment climate
- Knowledge economy and productivity
- Life course
- People with a foreign background
- Population ageing Regional statistics •
- •

The Statistical yearbook does not comprise international figures. Figures on the Netherlands in a European perspective are available from Eurostat, the statistical office of the European Union, which has its own database, Cronos, and from European Statistical Data Support (ESDS).

For questions and comments, please contact the Information service at Statistics Netherlands.

#### Increased labour productivity

In 2008, an average Dutch farm had 2.3 full-time workers and a net operational result of nearly 100 Dutch size units (dsu); these figures are up from 1.9 workers and 70 dsu in 1995. A dsu is a measure used to calculate economic performance in agriculture: it is based on profits minus specific costs. Labour productivity, in dsu per worker, rose by 15 percent between 1995 and 2008, to 43 dsu. There are large differences in labour productivity developments between the various sectors of agriculture. In horticulture it rose by 34 percent, in dairy farming by 11 percent; in the fruit growing sector it fell by 24 percent.

#### Dutch dairy cows increasingly productive

The number of dairy cows in the Netherlands fell by 21 percent in the period 1995–2005. The volume of milk farmers supplied to dairy factories in 2005 was only 3 percent smaller than in 1995, however. In the years 2006–2008 the number of dairy cows started to rise again. The continuing increasing productivity of the cows has meant that the amount of milk they produce also continues to grow. With 14 percent fewer cows than in 1995, Dutch dairy farmers supplied 5 percent more milk in 2008. This is a productivity increase of 22 percent.

#### Bad weather affects pear crop

The cold wet weather in the Netherlands during the flowering period of pear trees had an adverse effect on their fruit setting in 2008. The hail storms on 22 June also affected some of the crops considerably. As a result, only 172 million kilograms of pears were picked in 2008, much less than the 264 million kilograms in 2007. For apple trees, which blossom slightly later than pear trees, fruit setting fared better. As a result the apple crop was only 4 percent down on 2007. A number of new apple varieties have emerged in recent years: Junami, Rubens and Kanzi, for example.

#### Strong growth for construction turnover in 2008

Just as in 2007, turnover in the construction industry grew by nearly 10 percent in 2008. At just over 90 billion euro, it even hit a new high. Following three successful quarters, however, in the fourth quarter the effects of the economic recession were also visible in this sector.

In the first three quarters of 2008, turnover in the construction industry was nearly 12 percent higher on average than twelve months previously. In the fourth quarter it plummeted to 6 percent, however, as a result of the economic downturn.

All branches in construction increased their turnover in 2008. Companies in residential and non-residential construction (homes, offices, hospitals etc.) realised the largest growth (nearly 11 percent), while the increase was smallest for turnover in civil engineering (just over 5 percent). The other branches in construction, such as installation companies, painters and plasterers, realised a substantial increase in turnover in 2008: over 10 percent.

Residential and non-residential construction is the largest branch in the construction sector, accounting for nearly 50 percent of turnover. Civil engineering and other branches account for 17 and 37 percent of turnover respectively.

#### Fewer new homes completed

Just over 1,300 more new homes were completed in 2008 than in 2007. In the first quarter of 2008 the number of completed homes was still substantially higher than twelve months previously, but in the last quarter the number was down by just over 11 percent.

The share of flats and apartments in completed homes has increased strongly in the recent years. In 2000, one quarter of all homes completed were flats or apartments, in 2008 this was 39 percent. The increase seems to have stabilised in 2008, however.

The share of rented dwellings in new construction also rose in 2008. In 2007 these accounted for 28 percent of all new homes, in 2008 for 30 percent.

### 3. Education

#### Higher education level

The education level of the Dutch population aged 15–65 years is steadily increasing. In the period 2000–2008, the share of people with only primary school as highest level of completed education fell from 12 to 8 percent, while the share who had graduated from higher education rose from 21 to 26 percent. The number of women with a degree in higher education has increased particularly strongly in recent years. Within senior secondary vocational education (*mbo*), a shift is noticeable to higher level courses.

#### Fewer underprivileged pupils in primary schools

The number of underprivileged pupils in primary education has halved since school year 1995/'96. In school year 2007/'08 there were nearly 280 thousand underprivileged children in Dutch primary schools. This is the equivalent of 18 percent of the total number of pupils (excluding children in special needs schools). In 1995/'96 there were still more than 581 thousand, 39 percent of the total number of pupils. Underprivileged pupils are pupils who belong to a disadvantaged category of society according to the definition of the Ministry of Education, Culture and Science, and for whom schools receive extra funding. They include children whose parents have a low level of education. The decrease in the number of underprivileged children in recent years is mainly a result of the higher education levels of parents, although the criteria have also been adjusted.

#### Education spending accounts for less of GDP

Dutch spending on education amounted to 34.7 billion euro in 2007, 2.2 percent more than in 2006. Government spending on education accounted for slightly less of the gross domestic product in 2007, however. One reason for this is that the government paid 300 million euro for the 2007 student public transport passes to the transport companies in 2006. However, even if this is not taken into account, the share of education spending in GDP is smaller.

3.31 School drop-outs by level of education

#### Nearly 800 thousand enterprises

Nearly 800 thousand enterprises were registered in the Netherlands on 1 January 2008, the highest number ever counted. Just over 70 percent of these were one-man businesses and partnerships. These are so-called natural persons, who are severally liable for the enterprises' performance. Other companies are legal persons, they include private and public limited companies, cooperative associations, foundations and the government.

Nearly all enterprises in agriculture, forestry and fishery are natural persons. In construction and retail trade, too, there are relatively many natural persons; just over four out of every five companies in these sectors. Companies in the sectors public administration, banking, and private and social insurance, on the other hand, are nearly all legal persons. Water companies are all legal persons.

#### Companies using more ICT

In 2007, 86 percent of enterprises in the Netherlands had broadband internet access and 83 percent had their own website. It is the larger companies in particular that have these provisions. One third of enterprises sold goods and/or services online in 2007. Online buying and selling grew strongly in the period 2003–2007.

Half of Dutch enterprises had provisions in place to enable employees to telework in 2007, and one-fifth of enterprises used open source software.

### R&D position of the Netherlands

Total R&D spending in the Netherlands accounted for about 1.7 percent of the gross domestic product in 2007, the same share as in 2002. This means that Dutch R&D spending was lower than the average in Europe in both years.

One quarter of all Dutch enterprises undertook innovative activities in the period 2004–2006. In most cases, they collaborated with suppliers in innovation projects.

4.11 Investment forecasts of companies (% change on previous year)

#### Business services turnover continues to grow

Turnover in the Dutch business services sector continued to grow in 2008. Compared with 2007 it rose by 7 percent. The increase is smaller than in 2006 and 2007, when it grew by 10 percent per year. Turnover growth levelled out in the second half of the year as a result of the economic downturn. The number of hours worked by temp agency workers fell in the third quarter of 2008, for the first time since the first quarter of 2004. The number of job vacancies in business services also fell at the end of the year. At the end of 2008, there were 40,400 job vacancies; twelve months previously this was 52,800.

# No more growth for investment by institutional investors in 2007

Following four years of growth, investment by institutional investors showed a very small decrease in 2007. At the end of 2007 these investments were worth 1,148 billion euro, 0.1 percent less than one year previously. This lack of growth in the value of institutional investment is a result of developments in share prices, just as it was in the decline in the years before 2003 and the subsequent recovery. Share price developments resulted in a value increases of 78 billion euro in 2005 and 51 billion euro in 2006, and a value decrease of 4 billion euro in 2007. As the value remained almost unchanged in 2007, investment of institutional investors fell from 213 percent of the gross national product (GDP) in 2006 to 202 percent in 2007. As we know, the situation changed drastically in 2008. Statistics Netherlands expects to be able to publish figures on the full extent of the losses in 2008 in July 2009.

5.17 Turnover in business services, 2008 (change on previous year)

5.18 Costs and profits in business services, 2006

#### Tax revenues continue to grow

Revenues from central government taxes amounted to more than 133 billion euro in 2007, 6.7 percent more than in 2006. Tax revenues have been showing a clear increase since 2004. Together, revenues from wage tax and value added tax were 9 billion euro higher than in 2006, as employment and spending both increased. In spite of tax rate reductions, corporate taxes rendered 0.6 billion euro more than in the previous year. Proceeds from environment-related taxes, on the other hand, were 0.8 billion euro down on 2006: because of the relatively warm winter of 2006/2007, households received energy tax rebates as they used less energy than foreseen.

## Government spending up again

Government spending amounted to 138.7 billion euro in 2007, 6 percent more than in 2006, when it rose by 6.7 percent. Spending on social protection rose by 2.8 billion euro. This increase was mainly caused by higher spending on childcare. Two-fifths of this is paid for from the revenues of the compulsory employer-paid childcare contributions. The government also put 0.6 billion euro extra into the state old age pension fund, so that the premium for state pensions could remain unchanged. More money was also spent on health care allowances, children's allowance and benefits for young people with a disability.

#### Local taxes rise by 5 percent

Municipalities expect to receive 7.7 billion euro in municipal taxes in 2009. This is 5 percent more than in 2008. Of the three main taxes, sewage charges are set to rise by most, followed by property tax and refuse collection rates. Sewage charges are expected to rise by 6.5 percent. The costs of operating the sewerage system have increased substantially in recent years as municipalities have tackled maintenance backlogs. In addition, since 2008 the tax can be used to pay for costs for the separate removal of rainwater and groundwater management.

#### More deaths from cancer, fewer from heart disease

For the first time, cancer was the most common cause of death in the Netherlands in 2008. In the first ten months of that year, 33.9 thousand people in the Netherlands died of cancer, and 33.1 thousand as a result of cardiovascular disease. Cancer has been the main cause of death for men since 2005. For women it is the second most common cause of death, but the gap with cardiovascular disease is closing. The fact that cancer is the most common cause of death is mainly the result of a strong decrease in deaths from cardiovascular disease. Since the mid-eighties in particular, the risk of dying from heart disease has dropped sharply. At the same time, the percentage of people dying from cancer rose steadily.

#### Fewer home births

In the years 2006–2008, 28 percent of births in the Netherlands took place at home. The share of home deliveries was still 34 percent in the period 1998–2000. The Netherlands is one of the few western countries where mothers-to-be can still have their babies at home. But the percentage of home births has been decreasing for years now. In 1953, 78 percent of women gave birth at home. The percentage of hospital births has risen from 22 percent in 1953 to 71 percent in 2006–2008. Women with a high level of education are more likely to give birth at home: an average 35 percent of them had their babies at home (1997–2008). For women with lower education levels this was 27 percent.

#### Spending on care rises by just over 5 percent

Spending on care – health care and welfare – in the Netherlands came to 74 billion euro in 2007, 5 percent more than in 2006. In the period 2004–2006, care spending rose by 3 to 4 percent per year. In the period 1998–2003 the average annual rise was 9 percent. Wage costs in care institutions rose in 2007. Moreover, more patients received costlier forms of GP care, more people were treated by physiotherapists and there was a higher demand for childcare. Care spending accounted for 13.2 percent of GDP in 2007. This share rose from 11.3 to 13.3 percent in the period 1998–2003. Since then it has remained just above 13 percent.

#### Hefty increase in purchasing power in 2007

Overall, the purchasing power of the Dutch population rose by 2.8 percent in 2007. For employees and their families it rose by 3.9 percent, and for self-employed households by 2.1 percent. The increase was smallest for people who were not active on the labour market in 2007: for pensioners and benefit claimants purchasing power rose by 1.4 percent. In 2005 and 2006, too, the purchasing power of these groups rose by less than for people in work.

#### Households more sombre over own financial situation

In 2008, a slightly smaller share of households reported that their financial situation had improved in the previous twelve months. At 18 percent this percentage is still higher than in 2006. One quarter of households said their financial situation had deteriorated. This is slightly up on 2007.

Households were also less optimistic about money matters in the future, too. At 14 percent, the share who expected their position to improve in the coming twelve months was substantially smaller in 2008 than in 2007 (19 percent). One in five households expected their financial position in the coming twelve months to deteriorate. In 2007 this was still only 14 percent.

#### Most millionaires older than 55

Just over one hundred thousand Dutch households were worth one million euro or more in 2006. On average their equity totalled nearly three million euro. The main earners in these households were often older: more than 39 thousand were over 65, and nearly 32 thousand were aged between 55 and 65 years. Only one thousand Dutch millionaires were younger than 35 years.

The substantial drop in the value of share holdings of households in the course of 2008 will certainly have consequences for the present number of millionaires.

102

#### International goods trade up slightly

The volume of imports and exports of goods was slightly higher in 2008 than in 2007. Imports were up 4 percent, exports 2 percent. Import prices rose by 4 percent in 2008, export prices by 5 percent. This raised the value of imports and exports by 8 and 7 percent respectively.

The growth of the volume of exports was thus clearly lower than in the four previous years. Compared with 2007, the value of exports to countries outside the European Union rose by less than exports within the EU (4 percent and 8 percent respectively).

#### Smaller trade surplus

The surplus on the balance of trade was just over 36 billion euro in 2008, 4.5 billion euro down on 2007. Exporters of chemicals (17 billion euro) and food (15 billion euro) accounted for the bulk of the surplus.

## International trade in services continues to grow

The value of Dutch exports of services was nearly 85 billion euro in 2008. This is an increase of 4 percent on 2007. The value of imports rose by just over 6 percent to 76 billion euro. Royalties and copyrights were an important factor in the growth of both imports and exports. For the increase in imports other business services, construction services and travel services contributed strongly.

## 9.1 Imports and exports of goods, totals (mln euro)

#### Dutch labour market remains tight in 2008

Labour market tension remained high in the Netherlands in 2008, although the rapid increase in labour shortage has now passed. Employment grew and fewer people were claiming social benefits. In the course of the year the increase in jobs slowed down and the decrease in unemployment that had been visible for a number of years came to an end. The number of job vacancies reached a record high in the course of 2008, but dropped sharply in the fourth quarter.

#### More people in work

The employed labour force rose by 151 thousand in 2008, to more than 7.4 million people. Labour participation also rose further: among women and 55-64 year-olds, it showed a spectacular rise, just as among people with a non-western foreign background. The number of part-time jobs, in particular, increased. Unemployment fell by 40 thousand, so that only 3.9 percent of the labour force were unemployed in 2008. In 2007 this was 4.5 percent. Unemployment did start to rise again slightly at the end of the year.

#### Collectively negotiated wages up 3.3 percent in 2008

Collectively negotiated wage rates were 3.3 percent higher in 2008 than in 2007. This increase is larger than the 2.1 percent rise in 2007, and even back at the level of the second half of 2002. Contractual hourly wage costs rose by 3.8 percent in 2008. This means the wage costs rose by more than the wages themselves. This is caused mainly by the increase in the compulsory income-based employers' contribution to health insurance. Total wage costs per fulltime equivalent rose by slightly less, namely 3.7 percent, mainly because fewer bonuses were paid than in 2007.

#### 10.1 Employment (1,000 persons)

10.27 Benefits for surviving relatives, 31 December (x 1,000)

#### Half of Dutch own a laptop

Laptops are becoming more and more popular in the Netherlands. In 2008, 56 percent of the population aged 12 to 75 years owned a laptop. More people also have access to the internet: more than 90 percent in 2008; and four out of five them have a broadband internet connection. Internet is increasingly used to listen to the radio, watch television or read newspapers. Nearly seven out of ten internet users use these options. Online banking is also gaining popularity. Nearly three-quarters of internet users now take care of bank matters online.

#### Dutch spend more on day trips

A day trip cost on average 14 euro per person in 2007. This is nearly 11 percent more than in 2002, after correction for inflation. Overall, the Dutch spent nearly 13 billion euro on recreational day trips. They spent most on average on food and drink: just over 8 euro. Considerably less was spent on entrance fees (3 euro) and transport (2 euro).

#### Fewer foreign tourists

More than 29 million tourists stayed in Dutch accommodation in 2008. This is 4 percent down on 2007. The decrease was mainly a result of the lower number of foreign visitors. The number of Dutch guests remained at about the same level: around nineteen million. The number of foreign guests in Dutch accommodation fell by nearly 8 percent, to only 10 million. Fewer Germans, Americans and Brits, in particular came to the Netherlands in 2008. Only the number of Belgians staying in the Netherlands rose: by 1 percent.

### 12. Macro-economics

#### Economic growth slows down

The Dutch economy grew by 2.1 percent in 2008, substantially less than in 2007. The global credit crisis took its toll in the course of the year. Initially, the high economic growth continued, but at the end of the year, the economy started to shrink. The Netherlands did do better on average in 2008 than large economies such as the United States, Japan, Germany, Britain and France. However, as global demand declined in the second half of the year, exports of Dutch goods came under increasing pressure. The growth in exports fell to an average 0.8 percent. The growth in consumer spending, too, decreased, while fixed capital formation did not increase at all at the end of the year. The former rose by 1.8 percent on average in 2008, the latter by 5.8 percent. The manufacturing industry suffered most from the decrease in demand. Manufacturing output remained at about the same level in 2008 as in 2007. As a result, growth in trade and transport also decreased. The number of jobs, however, continued to increase and unemployment fell.

#### Consumer debt slightly up

In 2008 Dutch private households took out 10.6 billion euro worth of new loans to buy consumer goods such as cars, furniture and electronics. This is 1.2 percent up on 2007. Current account overdrafts rose by 5.5 percent in 2008 compared with the end of 2007. This brought the total consumer debt at the end of 2008 to 27 billion euro, 2.7 percent more than at the end of 2007.

Half of consumer borrowing is in the form of open-end credit, although this has become less popular. Closed-end loans are now more in demand: in 2008 demand for closed-end loans rose by 19 percent. These loans have to be repaid in full by a specified date, with fixed a interest rate and fixed repayments. Credit card debts are also increasing: they rose by 8 percent in 2008.

#### A year of opposites for manufacturing industry

The Dutch manufacturing industry had a difficult year in 2008. In the first half of the year production grew by 1.7 percent, but after that manufacturers started to notice the effects of the economic crisis. In the third and fourth quarters production was down by an average 3.6 percent on twelve months previously. For the whole of 2008, production was 1.0 percent lower than in 2007. Because manufacturers charged higher prices for their products, however, turnover grew by 5.5 percent. In February it grew by 16.7 percent, the largest rise ever measured, while the 15.2 percent fall in December was one of the largest drops ever.

In January 2008 producers' confidence reached a record high of 9.4. By the end of the year, in December, the indicator was -21.1 almost the lowest value ever measured.

#### Energy consumption down in 2008

The Dutch used slightly less energy in 2008 than in 2007. Consumption was down in the fourth quarter in particular, by 7 percent compared with twelve months previously. Consumption of petroleum in 2008 was 1,279 PJ. This is about 5 percent less than in 2007. In the manufacturing industry the decrease was even as much as 8 percent. Coal consumption came to 334 PJ, just over 6 percent down on the previous year. Consumption in electricity plants and manufacturing was 5.5 and 8.5 percent lower respectively. Just over 4 percent more natural gas was used in 2008. The main reason for this was the colder weather than in 2007.

Production of renewable electricity rose to 7.5 percent of domestic electricity use in 2008. In 2007 it accounted for 6.0 percent. The increase was the result of an increase in the amount of electricity generated from wind energy and biomass.

## Dutch population perceives more traffic noise and less odour

The percentage of people in the Netherlands who experience noise nuisance from road traffic rose from 27 in 1997 to 31 in 2008. Nuisance from rail traffic also increased in this period. Noise nuisance from air traffic, on the other hand, affected fewer people.

Fewer people also experienced odour nuisance in the residential environment in 2008 than in 1997. Odour nuisance from traffic, industry and agriculture fell, while odour nuisance from open fireplaces remained at the same level.

#### Further fall in greenhouse gas emissions

The emission of greenhouse gases fell for the third year in a row in 2007. The emission of laughing gas, in particular, fell as a result of measures taken at nitric acid factories. In addition, methane emissions from refuse tips also decreased. Carbon emissions were at the same level as in 2006. Carbon dioxide emissions increased in electricity production as power plants produced more electricity in 2007. Carbon emissions from heating homes and workplaces, on the other hand, were lower in 2007 as a result of the lower consumption of natural gas, partly as a result of the mild winter. At 205 billion kg of CO<sub>2</sub> equivalents, the emission of greenhouse gases in 2007 was 4 percent lower than the level of emissions in 1990, the base year for the Kyoto Protocol.

#### Population growth up again

Net population increase in the Netherlands was 81 thousand in 2008. This is nearly three times as large as in 2006, when population growth reached a historic low. The stronger growth in 2008 was mainly the result of higher immigration and lower emigration. Nearly 16.5 million people were living in the Netherlands on 1 January 2009.

Immigration reached a new record in 2008: nearly 143 thousand people arrived in the Netherlands. Never before has Statistics Netherlands counted so many immigrants. In the first three quarters of 2008, most of these were labour migrants from the European Union. Emigration fell in 2008, on the other hand, from 123 thousand to 116 thousand people, thus pushing up population growth further.

An increase in the number of births also contributed to the higher population growth. The downward trend in the number of births that started at the beginning of the century turned into a slight rise last year. Nearly 185 thousand babies were born in 2008, just over 3 thousand more than in the previous year. Mortality also rose in 2008, but by less than the number of births.

#### One million more by 2038

Statistics Netherlands expects the Dutch population to grow by another one million people in the next thirty years. The number of inhabitants will peak at 17.5 million in 2038, after which it will start to decrease again.

The age composition of the Dutch population will change drastically in the coming years. The high number of births between 1946 and 1970 will be reflected in a strong growth in the number of old people. The number of over-65s will nearly double, from 2.4 million in 2008 to 4.5 million at the end of the thirties. At the same time the number of 0-19 year-olds will fall slightly from 3.9 to 3.8 million.

The substantial decrease in the number of births after 1970 will cause a decrease in the number of middle-aged people. The number of people aged between 20 and 65 years will decrease by nearly one million: from 10.1 million in 2008 to 9.2 million at the end of the thirties. This means that the potential labour force will decrease in the coming decades.

## 16. Prices

#### Inflation starts with strong rise, then drops sharply

Inflation topped 2 percent in 2008 for the first time since 2003. For the whole of 2008, average inflation was 2.5 percent. In the first half of the year inflation rose strongly, pushed up by higher food and fuel prices. In July and August it peaked at 3.2 percent. After that it started to fall, mainly as a result of falling oil prices, which made petrol a lot cheaper. Food prices did continue to rise, but less strongly than in the first half of the year. In addition, excise rates for diesel and tobacco products were raised in the course of 2008 and a tax on air travel was introduced on 1 July. The effect of these tax measures on inflation was around 0.3 of a percent point. Compared with other countries in Europe, inflation was very low in the Netherlands in 2008. With the exception of December, Dutch inflation was below the eurozone rate throughout the year.

#### Producers' prices up and down

Factory gate prices in the Dutch manufacturing industry were just over 7 percent higher in 2008 than in 2007. This is the largest increase in the last eight years. The rise was substantial in the first nine months of the year, with a peak of 12 percent in July. After this, the increases became smaller and smaller, and in the last two months of the year prices even decreased. One reason for the strong fluctuations was the rise and fall in oil prices. The petrochemical sector features large in Dutch industry. Prices rose by most in petroleum processing: more than 21 percent. In the chemical industry, too, price rises were larger than average, at nearly 9 percent. Prices of intermediate consumption rose by nearly 11 percent in 2008. This increase is twice as large as in 2007. Prices of intermediate consumption in the petroleum processing sector were 24 percent up; in 2007 they rose by just under 3 percent.

16.1 Prices of industrial products by sector (excl. construction) (% change on previous year)

#### More people feel safe, crime down

At the beginning of 2008, 20 percent of the Dutch population aged 15 years and older said they sometimes did not feel safe. This was the third year in a row that this percentage decreased. In 2005, 27 percent of people said they sometimes did not feel safe. Inhabitants of the strongly urbanised areas are most likely not to feel safe. In the police regions around Amsterdam, Rotterdam and The Hague one in four people said they sometimes did not feel safe in 2008. In the rural areas in the north, east and southwest of the country, only one in seven reported this.

One quarter of the population reported they had been the victim of frequently occurring crime in 2008. This, too, was down: in 2005 it was still 29 percent. There were relatively fewer victims of crimes against property, such as bicycle theft and burglary, in particular. The percentage of people who fell victim to vandalism hardly changed at all. One in three people living in the urban areas around Amsterdam and Rotterdam were victims of frequently occurring crime. In the rural areas in the provinces Friesland, Drenthe, Gelderland and Zeeland, this was around one in five.

# Most asylum amnesties granted to people from the former Soviet Union

The general amnesty for asylumseekers - effective from 15 June 2007 - was intended to put a stop to asylum procedures that had lasted for many years. Under certain conditions asylumseekers who had first applied for asylum under the old Aliens Act, effective until 1 April 2001, and who are still residing in the Netherlands may be granted a residence permit. At the end of June 2008, nearly 26 thousand asylumseekers had received a residence permit under this amnesty. More than one quarter of them came from the former Soviet Union and former Yugoslavia. There were also relatively many from Afghanistan and Iraq. About 6 thousand applicants turned out not to be eligible for amnesty under the scheme. They did not receive a residence permit, for example because they had not lived in the Netherlands without interruption, were a threat to public order, or had been untruthful about their identity or nationality on more than one occasion.

17.1 Percentage of people who report that they sometimes do not feel safe because of crime in their area, population aged 15 yrs and older (%)

# Slight growth for retail trade, turnover down for car dealers

As a result of higher prices, Dutch retail turnover was 2.6 percent higher in 2008 than in 2007. The volume of sales remained at about the same level. In 2006 and 2007 turnover grew mainly as a result of increased sales. Supermarkets, in particular, booked more turnover in 2008 than in the previous year; takings in specialist food shops were down, however. Turnover in the non-food sector remained at about the same level.

Car dealers closed 2008 with 4.5 percent less turnover than in 2007. In the first quarter of 2008 turnover decrease in this branch was only just under 1 percent. It subsequently rose quickly, to 11 percent in the fourth quarter.

#### Wholesale turnover continues to increase

Turnover in wholesale trade grew by 8.8 percent in 2008. This growth is comparable with the level in 2007. All sectors of wholesale realised more turnover in 2008. Trade in agricultural products and livestock, and in intermediate goods rose particularly strongly. Wholesale turnover in machines and equipment showed the lowest growth rate.

#### Turnover down for hotels and restaurants

The volume of turnover in the hotel and restaurant sector was 3.7 percent down in 2008 on 2007. This decrease came after a year of growth. As prices rose by 3.7 percent in 2008, turnover remained unchanged. Hotels and restaurants realised a modest growth in turnover in the first half of 2008. In the third quarter, however, turnover decreased for the first time since 2004. Hotels were one of the few branches in this sector with a higher turnover, although they did suffer from the economic recession: business spending decreased and fewer foreign tourists came to stay. After 16 quarters of growth, though, hotels too saw turnover fall in the fourth quarter.

#### Car remains firm favourite

Together, people living in the Netherlands travelled a total distance of more than 197 billion kilometres in 2007. Threequarters of these kilometres were travelled in a car. Public transport accounted for 11 percent, while nearly 10 percent were covered by moped, bicycle or on foot.

Car drivers drove about 9 percent more kilometres overall in 2007 than in 2000. The total distance covered by car passengers remained about the same in this period.

Buses, trams and the metro are becoming less popular means of transport. The number of kilometres travelled in these forms fell by no less than 23 percent between 2000 and 2007.

#### One quarter of households have two or more cars

Not only is car use increasing, car ownership is also rising. In 2000, three-quarters of households had at least one car. In 2007 this was the case for nearly eight out of ten. Just over half of households had one car, while nearly a quarter had two or more. At the beginning of 2008, 7.4 million cars were registered in the Netherlands, 1 million more than in 2000.

#### More container transport

In April 2007, just over 11 percent of goods arriving in the Netherlands by sea were transported in containers. In 1992 this share was much smaller (5 percent). The strongest relative growth in container transport is for agricultural products: from 16 to 54 percent. Fruit and vegetables in particular are more often transported in containers. Other food products (especially meat and fish) and metals were also increasingly shipped in containers.

Containerised shipping is efficient, as containers can be transferred relatively easily to other forms of transport, such as inland vessels and trains. Bulk goods such as petroleum, coal and iron ore are not suitable for container transport, and are therefore relatively rarely transported in containers.
